

- Goal for meeting-taking stock info from API to a server database
 - When a user logs on, API calls should get new information about stocks and update relevant info into the stock table.
 - Jake has API calls figured out, Ryan will work on setting up a database.
 - API call works and provides accurate information
- Want to have a mostly usable site by the end of the week
- Grace will work on setting up dependencies for the website.
- Should have the login/setup for the website done by wednesday for use in the lab.
- Goals for this week
 - Ryan -Work on DB
 - Jake-Finish API routing
 - James-Begin working on handlebars for homepage/login (mostly from previous labs as a starting point)
 - Grace-setting up dependencies in index.js
 - Rissan- working on navbar for website
